Embossed microtext seal

One of the protection and safety elements is MICROTEXT. We offer it in a printing combination with guilloche and saffron. Now your documents will be truly original and completely irreplaceable. We print the protective element by embossing with a metal holographic foil either directly on the document or on a pre-cut shaped sticker, which can also serve as a seal. The text is readable only under a magnifying glass and can also be in contours and with an error element - a three-dimensional effect.
